Ubi™ Work Tools

A collection of tools that enable people to organize, personalize, and work effectively

Ubi Work Tools

The Ubi Work Tools portfolio helps make any workspace more efficient, effective, and personalized. Individuals can arrange—and rearrange—the portfolio's assortment of tools to suit their personal preferences and workstyles. Based on research into organizing

principles, the portfolio is intended to promote accessibility, control visibility, and maximize space savings for a new and richer experience of working.

Designed for the Person

We created Ubi Work Tools around an understanding of people. In support of each individual's work essentials and lifestyle items and informed by the way people move and operate within their workspace, Ubi Work Tools provide a rich experience for everyone.

Suited for Many Styles

Depending on which items a person is using and what tasks are being performed, workers can assemble Ubi Work Tools accordingly. Whether a workspace is owned or used on a drop-in basis, the portfolio allows each individual to feel at home while in the office and work more efficiently.

The versatile Ubi Work Tools portfolio works cross-platform on all Herman Miller benching and desking solutions.

Ubi Work Tools increase organization and work in harmony with Formwork® stackable desktop storage, designed by Sam Hecht and Kim Colin.

Zoned for Optimal Placement

With an understanding of how compact spaces can feel efficient and supportive, the designers at Observatory developed the Ubi Work Tools portfolio with optimal placement in mind. The portfolio allows the individual to maintain spatial efficiency and visual hierarchy within his or her work area while contributing to a sense of ownership.

About Observatory

Working with the design firm Observatory, we created Ubi Work Tools to support each person's work essentials and lifestyle items. Ubi Work Tools are informed by the way people move and operate within their workpoints and provide a rich experience for the individual. We started with people and studied their work activities. To an understanding of these activities, we added a consideration of the types of tools people use—from analog to digital, from mobile to stationary—and how they use them to further their work.

Ayako Takase and Cutter Hutton of Observatory
